

## PUMP DOWN PLUG CATCHER

### PRODUCT 20-057

The **TechWest Pump Down Plug with Catcher** is used to catch pump out plugs and large debris from settling into the cellar or plug-back.

The plug may be used as a temporary plug to facilitate setting of hydraulic packers. The Plug is manufactured solid or with a hole and ball seat. Pressure is applied on the tubing to set the packers and shear out the seat. The catcher retains the plug or ball preventing debris while not restricting flow.
