

## SHEAR ON/OFF TOOL

### PRODUCT 20-073

The **TechWest Shear On/Off Tool** is a high pressure, left hand release, tubing disconnect device allowing the tubing string to be disconnected above a packer. It is designed as a two-piece tool, consisting of a running overshot and seal nipple.

It is used in operations that require repeated tubing disconnect and re-engagement without disturbing the packer.

The Shear On/Off Tool contains an internal wireline profile for landing a wireline plug to provide zonal isolation below the packer.

### FEATURES

- Designed for multiple disconnects and resets.
- 10k pressure differential rating
- Left-hand release (optional Right-hand release available)
- Automatic re-connect (no turn required)
- Premium tubing connections and special seal nipples available upon request
