

## DRAG ASSEMBLY

### PRODUCT 10-052

The **TechWest Drag Assembly** is designed with Drag Blocks and Inconel Springs and enables torque transmission to rotational tools/valves.

The tool is commonly used in series with TechWest's DH swivel and Selective Acidizing equipment to manipulate rotational valves, or any other tool where torque is required to be added to the tubing string.

The tool also provides a centralizing effect increasing tool life, especially in cup-type selective tools.

### FEATURES

- Non-rotational body provides ability to transfer torque
- Locator Keys may be used to replace Drag Blocks
