

WR WASHOVER TOOL

PRODUCT 10-084

The **TechWest WR Washover Tool** is used to circulate out debris that has settled on top of a WR (Product 10-049) or CW (10-249) Bridge Plug. If a Bridge Plug is suspected to have debris on top prior to unsetting, or is stuck do to debris, the WR Washover Tool is the first option to achieve equalization and retrieval of the packer.

The Washover Tool contains an internal shear ring used to indicate at Surface that the Latch Sub has been tagged and is free of debris.

MAGNET SUB

PRODUCT 10-044

The **TechWest Magnet Sub** is a junk retrieval tool used to collect and remove metal from downhole.

The tool is ran above a WR (Product 10-049) or CW (Product 10-249) bridge plug in order to catch any magnetically susceptible materials that may cause the packer to become stuck.

The tool incorporates up to twenty-one orthogonally opposed magnets capable of retrieving a heavy weight of debris.
