WR BRIDGE PLUG
PRODUCT 10-049

INTRODUCTION

The TechWest WR Bridge Plug is a non-rotational, versatile and reliable bridge plug that combines the advantages of wireline setting with easy and reliable retrievability. It is commonly used for (multi) zone or well isolation during fracturing, acidizing, cement squeezing, testing or well head repair operations.

The WR’s double acting slips securely anchor the Bridge Plug against pressure differentials from above or below. The customizable three element pack off design ensures reliable sealing at high pressures and temperatures.

The unique equalizing valve design allows any pressure differential to be equalized before the Retrieving Head is latched onto the plug. This feature is especially advantageous when retrieving the WR on endless tubing.

FEATURES

- Field proven and reliable design
- Differential pressure rating of 10,000 psi above and 8,000 psi from below (for most sizes)
- Straight-on set and straight-pull to release

OPERATION

The WR Bridge Plug may set on Wireline, or hydraulically using TechWest B105, B110, B120 or B20 setting tool. The WR Bridge plug uses an equivalent connection to the Baker E4 setting tools.

The WR Bridge Plug is retrieved using a WR or CW retrieving tool (Product No 10-081 and 10-281).
