

MODEL C NOK-OUT ASSEMBLY

PRODUCT 20-049

The **TechWest C Nok-Out Assembly** is often run with the Model C and L Packers and then converted to a temporary Bridge Plug. The Nok-Out is usually expended when the Seal Assembly is landed or can be knocked out at any time before running the Seal Assembly with a knock out string or a wireline sinker bar. The Nok-Out Assembly has a built in equalizing system to ensure ease of expending the plug.

MODEL L NOK-OUT ASSEMBLY

PRODUCT 20-203

The **TechWest L Nok-Out** may be run on the bottom of tubing using the tubing to Nok-Out Adapter. This system may be used for snubbing applications, or when tail pipe is run below the packer.

The plug is expended using sinker bars on sandline or endless tubing. Most common API and Premium Tubing Connections are available.
