

TECHSET ANCHOR-CATCHER

PRODUCT 15-355

The **TechWest TechSet Anchor-Catcher** features quarter turn set and release that can be landed in tension, compression, or in a neutral position. It shares the same robust slip system featured on the TechSet I packer. The TechSet Anchor-Catcher also includes an adjustable safety straight pull shear release. Special cone design maintains slip engagement through load reciprocation, preventing the anchor from working loose.

The compact design is ideally suited for doglegs and highly deviated wells. The tool is available with carbide slips for hard casing.

FEATURES

- One-quarter rotation set and release
- Ideal for deep or horizontal wells where tubing rotation is problematic
- Adjustable straight pull safety shear release
- Short overall length is suitable for highly deviated wells
- Can be set shallow by pulling tension after initial slip engagement
- Can be left in tension, compression, or neutral position

OPERATION

The Techset Anchor is $\frac{1}{4}$ turn RH set, $\frac{1}{4}$ turn RH release, with optional emergency shear release.
