

## X TYPE AND XN TYPE LANDING NIPPLES

### PRODUCT 20-359

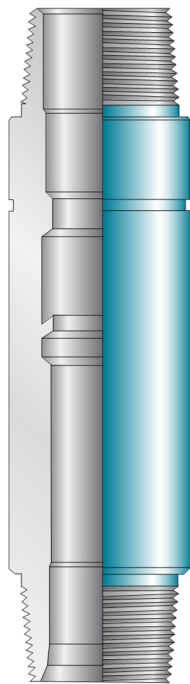

The **TechWest X Type Nipple** is a selective Landing Nipple that allows for the location and installation of many flow control devices such as Blanking Plugs, Bottom Hole Chokes etc.

This nipple has a locking groove which allows for the internal locking of the flow control device. The seal area provides a polished seal surface to pack off any flow control device.

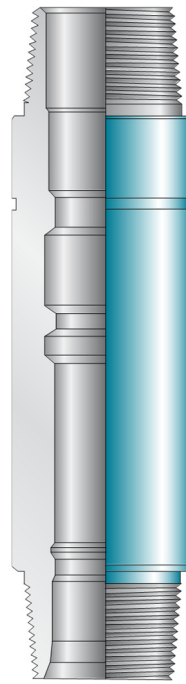

The design of the X Type Nipple allows for the installation of unlimited X Type Nipples in the tubing string.

The **TechWest XN Type Nipple** is a bottom No-Go version of the X Type Nipple. The bottom No-Go should provide the means to positively locate the appropriate flow control device into the XN Type Nipple.

Both Products are available with standard or premium threads and common or custom materials.
