

SCREENED AND PLATE DEBRIS BARRIER (SDB / PDB)

UNIT 130 / 132

The **TechWest Screened Debris Barrier (SDB)** and **TechWest Plate Debris Barrier (PDB)** sit on the top of a Tieback Receptacle (TBR) to prevent debris from entering the polished bore. The debris barrier is connected to a setting tool and is moveable on the setting tool permitting the setting tool to be stroked inside the liner hanger assembly. During normal operations, such as cementing, the debris screen remains at the top of the tieback receptacle except during the final stages of retrieval.

FEATURES

- Economical PDB design for all standard applications
- Reduces risk in cemented liner installations
- High filtration capability SDB design for small particulate wellbores
- Keeps abrasive materials out of the polished tieback receptacle
