

HYDRAULIC MECHANICAL LINER RUNNING TOOL

UNIT 231

The **TechWest Hydraulic Mechanical Liner Running Tool** (HMN), **non-cementing**, is used to run and set multi zone un-cemented frac liner systems hydraulically and mechanically release from the liner. Swivels as you run in hole for increased performance.

FEATURES

- Can be pushed and pulled to get the liner into position.
- Hydraulic setting and mechanical release allow for an economical design.
- Inner circulating string can be used when screen deployment is needed.
- Can be used in long ERD systems.
- Primary setting dart, and secondary fail safe dart comes standard
- Ability to pressure test the packer prior to tool disengagement
- Drainage ports provide the ability to drain fluid once you have disengaged from the packer during tripping out.
