

MECHANICAL OPENHOLE THERMAL PACKER (MOHT)

UNIT 147

The **TechWest Mechanical Open Hole Thermal Packer (MOHT)** is designed to grip and seal against open hole to isolate producing zones in high temperature applications.

The MOHT Packer is a one trip double grip mechanical set permanent packer. Premium surface treatment, the Pre-Squeeze mechanism, and precise manufacturing makes the MOHT Packer to one of the most reliable permanent packers for this specific application. MOHT Packer features the Pre-Squeeze mechanism to eliminate any relative movement of the Soft Set Thermal Element against open hole when packing off the element occurs.

Two MOHT Packers can be run in simultaneously with one trip. By adjusting the quantity of shear screws on each stage of each packer, the desired sequence of setting is achieved.

The MOHT Packer is made of materials for standard service and can be supplied for virtually any existing well environment.
